

Data Governance, Protection, and Compliance Management

Course Summary

Data Governance and Compliance involves defining decision rights and establishing accountability frameworks for information management, ensuring effective and efficient use of data to achieve organizational goals. This course provides in-depth knowledge and practical skills in Data Governance, Privacy, and Data Protection, covering international standards and best practices like ISACA, ISO 8000, and GDPR. Participants will learn through exercises and case studies to improve their organization's data management.

Expected Outcome: Participants will understand and manage data efficiently to tackle Privacy, Data Protection, and Cyber Security threats. They will develop action plans for information compliance, audits, and regulations, and implement Data Governance projects with best practices.

Course Methodology: Training includes exercises and case studies, with participants working in pairs and teams.

Objectives:

- Efficiently manage data and information to address threats and risks.
- Recognize Data Governance controls and strategies.
- Develop action plans for information compliance and regulations.
- Implement Data Governance projects.
- Manage data to international best practices.
